EDUCATION

Czech Technical University in Prague | *Bachelor of Computer Science* | **GPA: 3.8**

Majors: *Computer Science*

Expected Graduation: *Dec 2025*

Coursework: *Operating systems, Compilers, Machine Learning, Deep Learning, Artificial Intelligence, Computer architecture*

TECHNICAL SKILLS

Programming Languages: *C++, Java/Kotlin, Javascript*

Technologies | Frameworks: *React.js, Node.js, Git, Linux, AWS, GCP, Jenkins*

WORK EXPERIENCE

Jetbrains | Software Engineer | Prague, Czechia

July 2024 - Present

- Collaborating to make a low-code table data tool in IntelliJ IDEs. Core contributor of **Data Wrangler**.
- Contributed with ideas on design architecture and UX features for our product and implemented them on the IntelliJ Monorepo
- Learning to incorporate software design patterns and high quality code in monorepository environment
- Delivered AI agentic tools for jupyter notebooks in DataSpell.

Skills: **Java/Kotlin**, software design

Center for Machine Perception | Research Intern | Prague, Czechia

January 2024 - August 2024

- Analyzing and creating mapping between different keypoint representations in Pose Estimation models
- Experimenting with SOTA models in Pose Estimation with pytorch
- Learning modern Deep Learning advances from transformers to Computer Vision methods

Skills: **Python**, Pytorch, Deep Learning, Computer Vision

Deutsche Börse | Software Integrator | Prague, Czechia

June 2023 - January 2024

- Maintained complex cloud infrastructure of GCP, AWS in terraform, ensuring a seamless developer and tester experience
- Contributed to the migration of AWS to GCP by creating new compute engines and configuring for various purposes
- Introduced jacoco test coverage to sophisticated Java mainly codebase to assist testers
- Automated and maintained Jenkins pipelines that is used for both dev and CI/CD
- Optimized the downtime of Virtual Machine neatly and saved the company **1000\$ per month**.

Skills : GCP, AWS, **Terraform**, Ansible, **Jenkins**, Java, Shell Scripting, Automation, Unix

Hippo Cards | Software Engineering Intern | Ulaanbaatar, Mongolia

April 2022 - June 2022

- Contributed in the development of an ERP System designed to efficiently manage interns, building modern responsive Calendar and Task management interface on web.
- Learned advanced React topics, encompassing a wide range of libraries from Redux to Synapse, and conducted extensive experimentation with data fetching libraries such as useSWR and React Query.

Skills : **React.js**, **Next.js**, Laravel, Javascript, Git

PROJECTS

MBTI TEST - *A web-app with a custom algorithm to assess a person's MBTI*

August 2022 - Present

(<https://mbti-test-nine.vercel.app/>)

- Built a performant web-app with emphasized attention to responsive design and UX
- Contributed in the development of MBTI testing algorithm and efficiently implemented it on the web environment
- Currently the website attracted more than **200k users** and gaining **2.0k users** weekly

Skills: Javascript, Next.js, Responsive UI

Busify - *A mobile app for routing with public transportations*

August 2022 - September 2022

- Implemented modified A-star algorithm that shows different routes such as “few transits” and “shortest distance” through bus
- Built a prototype of the app and managed to secure 3rd place at Product Creation competition

Skills: React Native, Algorithms, Data Structure

Other projects include: Compiler-frontend for Mila, Multi-agent path finding visualization: <https://github.com/bel-learning>
